

2. The antiperspirant composition of claim 1 wherein nonaluminum antiperspirant compound is selected from;

a) the compounds having a following general empirical formula:

wherein z may vary from 0.9 to 2, and n is the valence of B and 2-nz is greater than or equal to 0, and B is selected from the group consisting of halides and nitrate and with or without amino acid or salts of amino acids; and

b) ~~As an alternative to or in conjunction with the above described zirconium salts, it is also possible to employ zirconium basic carbonate compounds which has been represented by empirical formulas~~

~~which should not be interpreted as precise with respect to chemical structure but should be regarded only as a guide to molar ratio.~~
